PROFESSIONAL SUMMARY – Full-Stack AI Engineer, Product Engineer, SaaS

Full-stack engineer shipping production AI SaaS in TypeScript, Python, Next.js, and the Vercel AI SDK, with depth in RAG, structured outputs, and agent orchestration. Scaled personalized messaging to 5,000+ messages/day and cut AI infrastructure costs 90% ($20K→$2K) via model selection and workflow optimization, and shipped multi-tenant LLM infrastructure, experiment-creation flows, and sales-automation product surfaces. Owns features end-to-end from APIs and model workflows to UI.

CORE COMPETENCIES

Full-Stack Engineer, AI Engineer, TypeScript, Python, Next.js, React, LLM Integration, Retrieval-Augmented Generation (RAG), AI Agent Orchestration, Structured Outputs, Multi-Tenant Architecture, Vercel AI SDK, LangGraph, Mastra, Production Operations, SaaS

PROFESSIONAL EXPERIENCE

Fuchka — tryfuchka.com **March 2025 - Present**

Product Engineer *India*

- Shipped a production conversational CRM for outreach and customer conversations via natural-language workflows on multi-tenant infrastructure.
- Built the full stack with Next.js, React, TypeScript, and Tailwind, including multi-tenant APIs, observability, OAuth flows, retries, rate-limit handling, and self-hosted production infrastructure.
- Integrated the Vercel AI SDK, Mastra, LangGraph, RAG, and multiple foundation-model providers for agentic workflows, structured outputs, and personalized messaging at roughly 5,000 messages per day.

PROFESSIONAL EXPERIENCE

Subconscious AI **May 2023 - July 2025**

AI Engineer, Full-Stack Engineer (Consulting) *New York, United States*

- Modernized research SaaS, accelerating experiment-ideation workflows and improving core product reliability for product and strategy teams.
- Migrated Python services to Poetry and containerized with Docker Compose, reducing environment setup time and engineering friction.
- Built AI-powered experiment-creation flow in Next.js, accelerating time-to-first-experiment by streamlining researcher ideation workflows.

Valley (Antler backed) **June 2023 - February 2025**

New York, United States

Head of AI & Agent Orchestration, Product Engineer **June 2024 - February 2025**

- Architected and shipped production agentic workflows with Vercel AI, LangChain, and XState, enabling scalable sales agent orchestration.
- Scaled personalized message generation to 5,000+ messages/day, enabling high-throughput customer engagement across multi-tenant infrastructure.
- Cut AI infrastructure costs 90% ($20K→$2K) by optimizing model selection, batching, and agent workflow efficiency.

Full-Stack Engineer **June 2023 - June 2024**

- Led V3 sales-automation SaaS frontend delivery across 4 engineers, owning end-to-end product surface and reliability.
- Reverse-engineered LinkedIn APIs and shipped a production integration that automated outreach in the core product.
- Reduced churn from 30% to 10% by stabilizing core workflows and improving product reliability, directly boosting customer retention.

Seam (YC S20) **May 2022 - May 2023**

Full-Stack Engineer *San Francisco, CA*

- Shipped the 2N Smartlock integration (lock/unlock and shareable temporary access), expanding the YC S20 IoT platform's device coverage.
- Built production integrations for multiple IoT security devices and improved the access dashboard so operators could manage locks and access from one place.
- Engineer on a team of 4, responsible for architecting core software components.

Bella & Bona **November 2020 - May 2022**

Full-Stack Engineer *Munich, Germany*

- Optimized Express/React order-management system for catering SaaS, ensuring reliable operations and reducing operational friction at scale.
- Led end-to-end React Native development for Android and iOS, shipping the customer ordering app used by office teams.
- Optimized React Native UI components, reducing order placement time from 5 to 1 second and lifting mobile conversion rates.

Technoark Solutions **July 2019 - July 2020**

Lead Frontend Engineer, Full-Stack Engineer *Mumbai, India*

- Led UI/UX architecture and design-to-delivery for enterprise web apps across US, UK, and HK markets.
- Orchestrated application data flow with Redux and translated client requirements into production frontend systems.
- Worked on the React, Java, koa, NextJS stack

PROJECTS

Decks — decks.tryfuchka.com **Concurrent — Side Project**

Product Engineer *Remote*

- Built an end-to-end AI deck generator (Next.js 15, React 19, TypeScript) that produces print-constrained HTML slides for LinkedIn, Instagram, TikTok, and Threads from a text brief and optional style references.
- Orchestrated Gemini via the Vercel AI SDK with fallback models, vision-based style extraction, and per-element refine; rendered exports with Puppeteer, pdf-lib, and S3.
- Implemented auth and billing with Better Auth, Drizzle/Postgres, and Dodo Payments (credit entitlements, token usage events, idempotent webhooks).

Epic Gains — epicgains.pro **Concurrent — Side Project**

Product Engineer *Remote*

- Built Epic Gains, a full-stack fitness platform that uses Gemini to turn workout videos into structured, editable training programs.
- Developed the product end to end with Next.js and TypeScript, including APIs, database schemas, exercise deduplication, progress tracking, achievements, and performance analytics.
- Deployed the platform with Docker and managed production integrations, debugging, and reliability.

EDUCATION

Jai Hind College **June 2015 - June 2018**

Bachelor's, Information Science

TECHNICAL SKILLS

Frontend: TypeScript, React, React Native, Next.js, Tailwind CSS, Redux, Android Development, iOS Development, UX Architecture, UI Architecture.

Backend: Node.js, NestJS, Python, PostgreSQL, Data Modeling, REST APIs, GraphQL, gRPC, Microservices, Express.js, Node.js, Web Scraping, Cheerio, Puppeteer, Playwright, Reverse Engineering APIs.

AI/ML: Vercel AI SDK, LangGraph, Mastra, LangChain, XState, Scikit-learn, Jupyter Notebook, Machine Learning, Sentiment Analysis, LLM Integration, Retrieval-Augmented Generation (RAG), Tool Calling, Model Context Protocol (MCP), Prompt Engineering, AI Agent Orchestration, Memory and Context Management, Structured Outputs, Crawl4AI.

DevOps: AWS, Docker, Docker Compose, Kubernetes, CI/CD, Observability, Langfuse, Inngest, Production Operations, Reliability Engineering, Scalability, System Design, Multi-Tenant Architecture.

Languages: English

CERTIFICATIONS

Machine Learning Engineer - Udacity, 2020. AWS Cloud Developer – AWS, 2023. GNIIT Software Eng - NIIT Ltd, 2020. MTA: Security Fundamentals - Microsoft, 2017. React - Udacity, 2018.
